EBSCO Open Dissertations

Increasing Discovery & Usage of ETD Research

How does EBSCO Open Dissertations work?

1. Your ETD metadata is harvested via OAI and integrated into EBSCO's platform, where pointers send traffic to your IR.

2. EBSCO integrates this data into their current subscriber environments and makes the data available on the open web via **opendissertations.com**.

EBSCO Open Dissertations makes electronic theses and dissertations (ETDs) more accessible to researchers worldwide. The free portal is designed to benefit universities and their students and make ETDs more discoverable. It can help drive traffic to your university's institutional repository.

Interested in adding your university's ETDs to EBSCO Open Dissertations and increasing traffic to your IR?
